

Who are Group Services & Systems?

Group Services & Systems (GSS) is an Australian owned IT solution provider. Working with key technology partners, we deliver best of breed technology solutions to meet business needs. Our aim is to become your organisation's trusted technology advisor.

We have been in the IT business for long enough to know that not every solution is the best on the market. That's why we partner with key vendors who we know provide the best solutions in their specific areas of expertise.

Security for your Network

While the threats to your network are many and varied, the effects of not being protected fall in to three main categories:

- **Data Loss and Corruption**
What would be the cost to your business if your customer database or accounts records were lost?
- **Reduced Productivity**
What is the cost to your business of your staff receiving distracting or even offensive SPAM emails at work?
- **System Shut Down**
What would be the cost to your business of your network being unavailable for an hour, a day, a week...?

GSS Network Security Solutions

Attacks on your network are a daily occurrence and regardless of your organisation's size or function the effects of just one successful attack can be devastating.

Our approach is first to learn enough about your organisation to assess the risks. Only then can we make a recommendation on the best products to make up the solution to address those risks. By providing a solution that is easy to use, comprehensive and effective we can ensure that you have peace of mind and are free to focus on your business - not your network security.

Managed Solutions

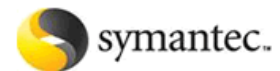

For customers needing network security solutions that require minimal resources to maintain, our range of managed solutions offer network security without needing a dedicated IT resource. Take the work out of network security by letting us look after it for you.
